

How to Embed a Course on WordPress

You can easily add the [courses](#) you create with ProProfs, to your WordPress blog. To add a course to WordPress, simply follow the steps below:

Step 1: Get the embed code for the course you want to embed

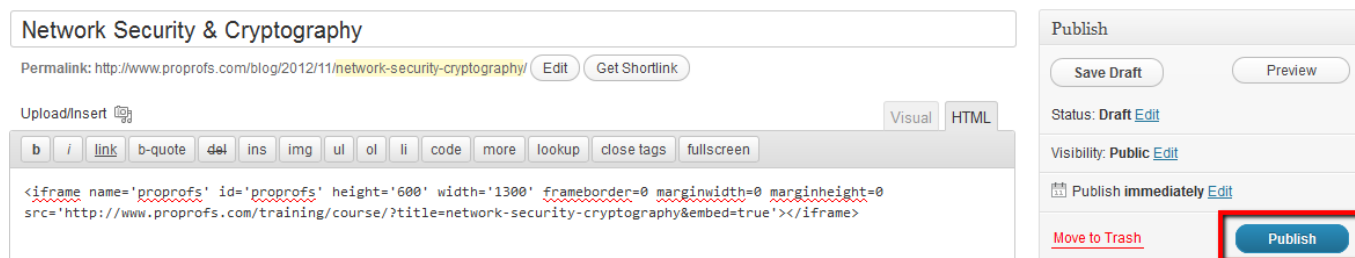

Step 2: Click on "HTML" mode.

Step 3: Paste embed code of course here and save

Step 4: Click on "Publish"

Step 5: You are done! Go to your blog and view the course to make sure.

Network Security & Cryptography

by [ProProfs Staff](#) on NOVEMBER 10, 2012 in [UNCATEGORIZED](#) [\[EDIT\]](#)

The screenshot shows a web browser window displaying a course page. At the top left is the ProProfs Training Maker logo. The course title 'Network Security & Cryptography' is prominently displayed with a lock icon. Below the title, it indicates '2 Chapters'. A progress bar shows '0% Complete'. The left sidebar lists the chapters: '1. Introduction to Networking' and '2. Security management'. The main content area contains a paragraph defining Network Security & Cryptography as a concept to protect network and data transmission over wireless networks, highlighting data security as a key aspect. Below the text are two input fields labeled 'Name' and 'Enter Email'.
